PHASE SEQUENCE INDICATOR · DISC ROTATING TYPE

PSI-1

Disc-rotating phase sequence indicator, bakelite body, 100–500 V AC.

100–500 V AC

Phase Sequence Indicator

A disc-rotating phase sequence indicator in a bakelite body — the rotating disc physically shows the direction of phase rotation (RYB or RBY), giving an immediate visual indication that is easy to read even in bright field lighting, before connecting or energising any 3-phase motor, generator, or transformer.

- **Disc-rotation display** — direct visual RYB/RBY indication
- **Bakelite body** — compact, rugged, lightweight
- **100–500V AC, 25–65Hz** — wide operating range
- **3-lead R/Y/B connection** — colour-coded, crocodile clips
- **Horizontal use only** — per manufacturer specification

Manufactured in India since 1963 — trusted by various State Electricity Boards, Indian Railways, cement and metal industries, and other sectors.

- R** **Disc Rotation** Visual RYB/RBY indication
- V** **100–500V AC** 25–65Hz operating range
- H** **Horizontal Use** Per manufacturer spec

01 Full Specification Sheet

PARAMETER	SPECIFICATION
Indication Method	Disc rotation
Body	Bakelite
Operating Voltage	100–500 V AC
Frequency	25–65 Hz
Operating Position	Horizontal only
Accessories	3 Nos. 1m testing leads (R/Y/B) with crocodile clips, and carrying case
Warranty	12 months against manufacturing defects

02 Typical Applications

- 3-phase supply phase sequence verification
- Motor connection commissioning
- Panel and switchboard testing

03 What's in the Box

- ✓ 3 Nos. 1m testing leads (R/Y/B)
- ✓ Carrying case
